

1. BODY

2. HEADER

3. SIDEBAR

4. MAIN

5. MENU & LOGO

6. SEARCH

7. USER MENU

8. MAIN NAV

9. USER NAV

10. SUBSCRIPTIONS NAV

11. EXPLORE NAV

12. TOPICS NAV

13. RECOMMENDED VIDEOS CONTENT

14. RECOMMENDED SHORTS CONTENT

I chose the YouTube home website for this activity. At first, I quickly labeled the body, which is the whole website of what I can visually see. After that, I broke it down to its major parts such as the Header, Sidebar, and the Main. With the breaking down of its major parts, I continued to break it down to smaller parts. Like for the Header, I mapped out the Logo with the menu bar, the search bar, and then on the far right, is where the user menu or settings is. Continuing to the Side bar, I mapped out each navigation section with the main one, the user's navigation which contained the videos they save, then the subscriptions navigation, and lastly is the explore navigation which is on the bottom. For the main content, is where I mapped the navigation bar with the recommended topics for videos, and then below it is the recommended videos and shorts.

I got confused at first especially with the blocking of the smaller parts like the logo and main menu, the navigations on the side bar and the topic recommendations on the main part. I was not sure of what to label them or are they separated. With the help of site inspection, I was able to identify some but changed the others such as the navigation for the user and the main navigation. They were together but I separated them just because I think that I'll be able to section and lay-out it better that way.
